

Humidity Indicator

Providing relative humidity inside Cases & Racks

Humidity Indicator

CP Cases' humidity indicator provides notification of the relative humidity ranging from 30% and 50% Rh (at 20°C). Relative humidity indicators can be used in conjunction with desiccators, desiccant bags and moisture adsorbers. Humidity indicators can also be used to monitor the relative humidity inside cabinets, enclosures, flight cases, pipelines, packaging barriers and instrument cases. A distinctive colour change of blue to pink indicates the transition of the relative humidity from dry to wet. Relative humidity indicators are fully reversible when dried with a desiccant or placed in a dry environment.

Applications:

- Electronic equipment
- Electrical equipment
- Optical equipment
- Cameras
- Laser systems
- High voltage junction boxes

Product No	Dimensions			Colour Indicator Level
	A/F	Mounting Hole Diameter	Overall Length	
AAHI3050	35mm	28mm	16mm	30%/50%
NSN No: 6685-99-B662-3061				

- Note: RF Screened humidity indicator available on request.

Key Features:

- Relative humidity 30% and 50% (at 20°C)
- Distinctive colour change indication
- RFI screened
- Low profile
- Thread or through hole mounting
- Temperature range from -40°C to +80°C
- Completely reversible indicator
- IP 68 rating (optional)
